PAUL E. BUTLER III · FRONT-END DEVELOPER

(303) 513-6378 // 1270 N. MARION ST. #212 **DENVER, CO** 80202
http://pebutler3.com · https://github.com/pebutler3 · https://www.linkedin.com/in/pebutler3/

[INTRO]

I have been working as a front-end developer, full time, for the last 5 years. I have had the opportunity to work with companies ranging from major social media companies to non-profits. I thoroughly enjoy the ever-changing landscape that is the front-end. If there is a better, more performant, way of doing something then I want to know about it.

[DESIRED ROLE]

I am looking for a Front End Developer position at an organization that truly cares about fostering growth in their developers. A position of which continued learning is a must and settling isn't an option.

[EXPERIENCE]

FRONT-END DEVELOPER | INFIELD DIGITAL · DENVER, COLORADO

JAN 2017 - PRESENT

At Infield I am apart of many different teams and projects. These projects are of many different stacks including AEM 6+, Angular 2, and React. Being in an agency environment enables me to do more than enough learning on the job as we are regularly tasked with unconventional issues & goals. At Infield best practices are a must and we review every commit in hopes of improving our work and growing as developers while helping our teammates to do the same.

FRONT-END DEVELOPER | BRIGHT STORES, INC. · DENVER, COLORADO

FEB 2016 - JAN 2017

As a member of the Front-End Team at Bright Stores I was able to build e-commerce (think fork of Shopify) solutions for companies all across the United States, Canada, and Australia. Being the senior-most front-end developer on the team I was able to bring in modern development practices to the company such as git, code reviews, scss, modern build tools, and a general concern for optimization & performance. Working with the company president I helped institute a developer learning schedule which included exploring new technologies and pair-programming for knowledge transfer as well as problem solving.

FRONT-END DEVELOPER | SUBLIME DIGITAL · DENVER, COLORADO

JAN 2014 - DEC 2014

At Sublime Digital I moved away from design and became strictly a front-end developer role where I was able to realize my true passion in development. I worked with design firms (mainly in the liquor industry) to build out the front-end of their client facing web projects. I parted ways with the company amicably as I was not confident in the longevity of the company and I was proven correct as the owners left the company for positions elsewhere.
Note: The Sublime Digital I worked for is not https://sublime-digital.com .

DIRECTOR, DESIGN & DEVELOPMENT | CAP MANAGEMENT · DENVER, COLORADO
DEC. 2012 - FEB. 2016
Built, designed, and managed over 30 websites for CAP Management and all of their clients. At CAP I was able to lead all aspects of my projects for which I was able to really grow and build my self-sufficient skillset.

[CURRENTLY WORKING WITH]
- AEM
- Angular 2
- React
- Webpack
- Gulp
- Foundation
- Flexbox
- SCSS
- BEM
- jQuery
- HTL (HTML Template Language)

[CURRENT STUDIES]
- JavaScript
- React
- Node Js
- Webpack
- Angular 2

[IN MY FREE TIME]
- Spending time with my wife and our two daughters.
- I work on side projects and attend developer meet ups.
- I also enjoy mentoring those of whom are trying to learn to code or encouraging others to try coding even if the aren't actively pursuing it.
- Watching The Barclays Premier League.
